I have offered publications to Diane Tahan on mold and clean up after flooding. Is that something you could use where you are going?

Subject: October is Children's Health Month

Greetings Environmental Educators,
As you may know, EPA recognizes October as **Children's Health Month**. During this special emphasis month, efforts are focused on highlighting programs that protect children's health from environmental risks. This year, the Region 6 Children's Health Program in partnership with Environmental Education is offering **a free set of AQI Flags to the first 50 organizations** that sign up to participate in the AQI Flag Program.

The goal of the Air Quality Flag Program is to alert organizations to the local air quality forecast and to promote actions to protect people's health, including those with asthma. Previously, the program was used in schools and there is a comprehensive curriculum that supports the use of the flags. Recently, other organizations have begun flying the flags, and now it is used by NGOs, hospitals, universities, libraries, and other community organizations.

Here's how it works

Each day your organization raises a flag that corresponds to how clean or polluted the air is. The color of the flag matches EPA's Air Quality Index (AQI): green, yellow, orange, red, and purple. On unhealthy days, your organization can use this information to adjust physical activities to help reduce exposure to air pollution, while still keeping people active. To learn about activities that support the flag program, follow this link: https://www.airnow.gov/index.cfm?action=flag_program/index

To receive the free flags, you just need to register. Follow this link and fill out the online form https://www.airnow.gov/index.cfm?action=school_signup/epa/program.

If you are among the first 50 to register, a set of free flags will be sent to you in about two weeks. We will send out flags as long as our limited supply lasts.

Thank you for your efforts to protect and educate children.
